Programs on Command Line Arguments

1. Write a java program to print first two command line arguments.

2. Write a java program to print all command line arguments.

3. Write a java program to sum of two integer numbers. The input numbers are taken as command line arguments. If exactly two numbers are not provided, then an appropriate error message is displayed.

4. Write a java program to display the sum of all command line arguments.

5. Write a java program to count the command line arguments which are less than 100.

6. Write a java program that reads a number N and a Word from command line input, then prints the word N times, one word per line.
